LPS INTEGRATION JOINS IMPULSE POINT'S PARTNER•CONNECT PROGRAM
IT Security Consulting Firm to offer Safe•Connect Network Access Control Solution

NASHVILLE, TN, July 9, 2007 – Impulse Point, the leading network access control solution provider for large enterprise networks, announced today that LPS Integration has become a value-added reseller of the Safe•Connect™ network access control solution.

As a Partner•Connect Solution Provider, LPS Integration will provide its customers the ability to quickly integrate a highly scalable network access control (NAC) solution into vendor-diverse network environments without the need to upgrade or manipulate their existing network infrastructure.

“Safe•Connect is an ideal NAC solution for a company that needs to better manage and enforce their security policies in a non-intrusive manner,” says David Linzy, Chief of Operations at LPS Integration. “We have clients clamoring for a cost-effective NAC solution that can be installed now—without waiting for industry standards to develop and stabilize. Our systems integration division is also positioned to enable evolving technologies such as 802.1x in conjunction with the Safe•Connect solution.”

Genevieve Lapham, Regional Business Development Manager at Impulse Point added, “Impulse Point is pleased to be able to expand our value-added reseller program with an industry leader such as LPS Integration. Their expertise in systems integration and security consulting is well known throughout the Tennessee region. Adding Safe•Connect to their security portfolio will allow them to offer yet another critical layer of protection to their clients.”

Safe•Connect is a network access control solution that easily integrates into vendor-diverse network environments by delivering a switch independent alternative to isolate non-compliant endpoint devices at Layer2. Safe•Connect is also compatible with 802.1x, providing the flexibility to quarantine users at the router, switch, or endpoint device.

About Impulse Point

Designed for highly scalable and vendor diverse environments, Impulse Point's Safe•Connect™ Open Network Access Control (OpenNAC) solution enables organizations to automate and enforce end user authentication, anti-virus, anti-spyware, Microsoft security patches, P2P file sharing, and custom endpoint security policies. The result is a more secure, reliable, and predictable IT network infrastructure. Impulse Point (www.impulse.com) is headquartered in Florida and one of Tampa Bay's premier technology innovators.
