### **IMPULSE POINT ANNOUNCES SAFE•CONNECT™ VERSION 3**

*Delivers Enhanced Open Network Access Control (OpenNAC™) Functionality*

**TAMPA, FLORIDA, June 13, 2006** – Impulse Point, a leading network access control solution provider for enterprise networks, announced the availability of Version 3.0 of its Safe•Connect™ OpenNAC solution.

Safe•Connect V3.0 provides increased capabilities for endpoint policy management including an enhanced Custom Policy Builder Module that allows enterprises to create enterprise specific endpoint security policies to address unique acceptable use standards and regulatory requirements. Safe•Connect V3.0 also provides tighter integration with enterprise directory structures such as AD, LDAP, and RADIUS that enable network access policies to be applied according to the role of the end user - employee, vendor, student, guest, etc.

Safe•Connect provides an open network access control (OpenNAC) solution approach that addresses the need to easily integrate into diverse heterogeneous vendor environments and delivers a hardware independent mechanism to isolate non-compliant endpoint devices at Layer 2. The inherent scalability advantages of Safe•Connect's distributed architecture enables large organizations to address their NAC enterprise requirements in a cost effective manner.

Highlights of Safe•Connect Version 3.0 include the following:

- Policy group management based on directory services defined role (employee, student, guest, etc.)
- Ability to develop custom policies based on file type, registry setting, process, service, or MS patch
- Increased flexibility of endpoint custom messaging by policy group
- Gaming device (i.e. Xbox) policy management support
- Enforce policies on rogue wired and wireless NAT access points
- Enhanced support for Apple Macintosh computer systems
- Reporting and user interface policy management enhancements

"We continue to raise the bar by providing new features and capabilities to our Safe•Connect system based on customer feedback and industry advancements", commented Max Garcia, Product Development Director at Impulse Point. "Our proactive 24/7 monitoring and managed support sets us apart from the competition."

#### ***About Impulse Point***

*Designed for highly scalable and vendor diverse environments, Impulse Point's Safe•Connect™ Open Network Access Control (OpenNAC™) solution enables organizations to automate and enforce end user authentication, anti-virus, anti-spyware, Microsoft security patches, P2P file sharing, and custom endpoint security policies. The result is a more secure, reliable, and predictable IT network infrastructure. Impulse Point ([www.impulse.com](http://www.impulse.com)) is headquartered in Lakeland, Florida and is one of Tampa Bay's premier technology innovators.*
